

Aleksandar Milicevic

CONTACT INFORMATION

e-mail: aleks@cubist.dev
web: <https://aleksandarmilicevic.github.io>

CURRENT POSITION

Engineer at **Cubist Inc**

September, 2022 - present

Building tooling for Web3, focusing on security, correctness, and ease of use.

PREVIOUS

Microsoft

Principal Software Engineer

Senior Software Engineer

Software Engineer II

August, 2022 - September, 2022

March, 2018 - August, 2022

August, 2015 - March, 2018

Tech lead for the development of various low-level Linux-specific solutions, like process sandboxing and filesystem virtualization. Key contributor to a novel build system that leverages said solutions to automatically add caching and distribution to any existing build.

Filesystem Virtualization for Linux. Lead role in designing, implementing, and optimizing a virtual filesystem for Linux that allows a client's filesystem to be mimicked on a remote server, overlaid on top of a server's local filesystem, with client files being uploaded selectively and on-demand, as soon as they become needed. (FUSE, OverlayFs, Posix, gRPC, C++, C#)

Process Sandboxing and Substitution for Linux. Lead role in designing, implementing, and optimizing a library for dynamically observing (and preventing undesired) file accesses of a process, as well as substituting its select child processes and executing them in a virtual filesystem on a remote server. (LD_PRELOAD, rtld-audit, C++, C#, Azure VMs)

Process Sandboxing for macOS. One of two main contributors to a process sandboxing library implemented as a kernel extension for macOS. Designed/implemented a concurrent lock-free trie data structure, used it to implement layers of caching for the code running in kernel mode, resulting in a 35% performance increase. (Kext, KAuth, TrustedBsd, C++, C#)

Debugger and Query Language for Analyzing Build Logs. Designed/implemented a first-order relational query language for conveniently analyzing build logs data and graphically representing the results in a VSCode debugger session. (VSCode Extension; C#, TypeScript)

Extend a Build Engine to Support Daemon Processes. Argued strongly for developing a generic support instead of hardcoding an ad-hoc implementation for a single use case we had at a time. This is atypical for build engines, which can typically only run a process after all its dependencies have completed. In some rare cases, mostly for performance reasons, it is useful to have a process (e.g., a service, or a daemon) that runs throughout the build. The argument prevailed, I designed the abstractions, implemented the original use case, and observed a 90% reduction in build tail time. By now several more use cases have benefited from this technology. (C#)

RESEARCH INTERESTS

Declarative programming, specification languages, executable specifications, programming languages, connecting high-level specifications with low-level code, formal methods, software verification, program synthesis, program analysis, software engineering.

EDUCATION	Massachusetts Institute of Technology , Cambridge, Massachusetts USA
	<p>Ph.D., Computer Science, May 2015</p> <ul style="list-style-type: none"> • Topic: “<i>Advancing Declarative Programming</i>” (advised by Prof. Daniel Jackson) <p>M.S., Computer Science, September 2010</p> <ul style="list-style-type: none"> • Topic: “<i>Executable Specifications for Java Programs</i>” (advised by Prof. Daniel Jackson)
	School of Electrical Engineering , Belgrade, Serbia
	<p>B.Sc. in Computer Science, November 2007</p> <ul style="list-style-type: none"> • Topic: Parallel Test Generation and Execution with Korat (advised by Prof. Dragan Milicev)
ACADEMIC EXPERIENCE	Massachusetts Institute of Technology , Cambridge, Massachusetts, USA
	<p><i>Research Assistant</i> August, 2008 - May 2015</p> <p>Includes Ph.D. research, Masters-level coursework and research projects.</p> <p><i>Teaching Assistant</i> Spring 2009, Fall 2009</p> <p>“6.005 Elements of Software Construction”: gave recitations, graded problem sets and projects.</p>
RESEARCH INTERNSHIPS	Microsoft Research , Redmond, WA, USA
	<p><i>Research intern</i> June, 20011 - August, 2011</p> <p>Worked with Rustan Leino on program synthesis from first-order declarative specifications.</p>
	Microsoft Research Cambridge , Cambridge, United Kingdom
	<p><i>Research intern</i> June, 2009 - August, 2009</p> <p>Worked with Hillel Kugler on analyzing and executing Live Sequence Charts using SMT.</p>
	University of Illinois at Urbana Champaign , Urbana, Illinois, USA
	<p><i>Visiting Scholar</i> August, 2006 - September, 2006</p> <p>Worked with Darko Marinov on bounded-exhaustive test input generation.</p>
INDUSTRY EXPERIENCE	Serbian Object Laboratories , Belgrade, Serbia
	<p><i>Software Engineer</i> March, 2006 - August, 2008</p> <p>Actively worked on the development of the EDMT Server (www.bmmsoft.com). Technologies used: WebWork, Java Servlets, WS, SOAP, JSP, HTML, CSS, JS, AJAX, with Sybase IQ database.</p>
	Google Inc. , New York, New York, USA
	<p><i>Software Engineering Intern</i> July, 2007 - September, 2007</p> <p>Worked with Nemanja Petrovic on decoding barcodes from images taken with a cell phone.</p>
RESEARCH PROJECTS	<ul style="list-style-type: none"> • <i>Alloy*</i> (https://aleksandarmilicevic.github.io/hola): a general-purpose, higher-order relational constraint solver (over bounded domains). • <i>Sunny</i> (https://github.com/aleksandarmilicevic/sunny.js): a model-based, event-driven, policy-agnostic paradigm for developing reactive web applications. • <i>αRby</i> (https://aleksandarmilicevic.github.io/arby): an embedding of a declarative modeling/specification language (alloy) into an imperative object-oriented programming language (ruby). • <i>Squander</i> (http://people.csail.mit.edu/aleks/squander): a unified environment for execution of declarative specification (written in first-order relational logic) and imperative Java code. • <i>Jennisys</i> (http://research.microsoft.com/en-us/projects/jennisys): a programming language and a synthesis tool from declarative first-order specifications to imperative code.

- *The Alloy Analyzer* (<https://alloytools.org>): an automated model finder for a first-order relational specification language.
- *Korat* (<http://korat.sourceforge.net>): a tool for bounded-exhaustive generation of test inputs based on complex constraints the inputs must satisfy.

CLASS PROJECTS

- *Software model checking using the SMT Theory of Lists* **December 2010**
(Foundations of Program Analysis) Resulted in a publication in NFM'11.
- *Puzzler* **May 2009**
(Natural Language Processing) Solver for natural-language logic puzzles (e.g., the famous Einstein puzzle) via a translation to formal relational logic and a use of an automated constraint solver for it. Done in collaboration with colleagues Joseph P. Near and Eunsuk Kang.
- *Visual CPU simulator* **July 2006**
(Computer Architecture) Register Transfer Logic view, per-clock, per-instruction and per-program simulation advance, real-time register and memory modification, compiler from an assembly language. Done in collaboration with Ana Hadzievska, Dusan Matic, Milos Petrovic, Milos Siroka.
- *Multithreading library for the 16-bit C++ compiler* **July 2005**
(Operating Systems) Java-like threading model for the 16-bit C++ compiler. Features: context switching, explicit synchronous preemption, asynchronous preemption (caused by an interrupt), time sharing, round-robin scheduling. Concepts: semaphores, events, mutexes, monitors.
